

CyberLink PowerDirector 7

Powerful Video Editing With Unlimited Possibilities

Offering a perfect balance of advanced features and automated editing tools, PowerDirector has everything users need to create high-quality video projects.

- Automated editing features let users of all ages and levels of experience create video masterpieces.
- Support for widescreen and high-definition video formats ensure superb image quality for a final production.
- A rich library of transitions, effects, titles, PiPs, and DVD menus, includes ample options for producing videos of all kinds: training, promos, records of events, school projects, and more.
- Output to an iPod, PSP, DVD, as a video file, to DV tape, or publishing on YouTube™, offers exceptional flexibility for delivering video content.
- Direct access to photos on Flickr™ and sounds on Freesound™ provides an unlimited selection of copyright-free content.

PowerDirector Features:

- **More Powerful Editing Options**

PowerDirector now features 6 overlay tracks, offering users the flexibility to create sophisticated video projects.

- **Better Media Management**

Media sub-folders allow users to organize their project resources into categories. The media library can be exported for use in other projects.

- **Unlimited Resources**

Downloading from Flickr and Freesound lets users choose from thousands of copyright free images and audio clips.

- **Director Zone**

CyberLink's Director Zone web site offers a library of effects and templates created and customized by other PowerDirector users.

- **Magic Movie Wizard**

Great for beginners, convenient for experts, the automated step-by-step approach quickly guides users through movie production.

- **Photo Slideshow Designer**

New styles for presenting photos let users turn a folder of image files into a dynamic slideshow in minutes. Advanced editing features offer greater control if needed.

- **Animated PiP Designer**

Alpha-blended objects and a motion path generator create dramatic PiP effects to enhance video projects. 6 PiP tracks enable the creation of pro-like animations.

- **Improved Magic Tools**

Video can be stabilized with a few clicks and with greater accuracy. Extreme back light and white balance can be fixed automatically.

- **Cool Transitions and Effects**

A huge library of transitions and effects turns video clips and photos into an alluring storyline. DVD template designs, moveable buttons, text and color tools let users create stylish menus for their movie DVDs.

- **Publish Directly to the Web**

Video content can be output for a blog or an online promotion by uploading the project directly to YouTube™.

- **Great Output Options** - High-definition projects can be transferred back to HDV tape. Users can create personalized pro-like DVDs for playback on a home player or PC. Videos can be output for an iPod or PSP.
